PROFESSIONAL SUMMARY

SQA Engineer II with 2+ years at Brain Station 23, where I grew from Trainee to leading quality for two of Bangladesh's major e-commerce platforms. I specialize in Playwright (TypeScript) automation and JMeter performance testing — but what I care most about is building testing processes that actually prevent production issues, not just catch them. I communicate directly with clients and take full ownership of product quality from requirement analysis to release.

CORE SKILLS

Manual Testing: Test Planning, Test Case Design, Functional Testing, Regression Testing, Smoke Testing, UAT, Bug Reporting, Root Cause Analysis

Web Technologies: HTML, CSS, JavaScript (familiar), TypeScript, Java

Test Automation: Playwright (TypeScript), Selenium, Appium, Postman, Newman

Performance Testing: JMeter, BlazeMeter, K6

Agile & Project Tools: Jira, Trello, Asana, Azure Boards, Agile/Scrum, Sprint Planning, Daily Standups

CI/CD & Version Control: GitHub, GitHub Actions, GitLab, GitLab CI/CD

Platforms: Web, Android, iOS, Cross-browser (Chrome, Firefox)

Soft Skills: Client Communication, Requirements Analysis, Cross-functional Collaboration, Detailed Reporting, QA Documentation

WORK EXPERIENCE

SQA Engineer II | Brain Station 23

Jan 2026 – Present

- Participated in requirements review and website analysis to identify testability risks early and align test coverage with business expectations.
- Worked in a team setting with developers, business analysts, and project managers within Agile/Scrum teams to deliver high-quality product releases.
- Wrote test plans and test cases, executed tests, and communicated findings and concerns to the team in a timely manner across web and mobile platforms.
- Managed independent client communication for QA status updates, risk reporting, and issue escalation, demonstrating a service-oriented mindset.
- Coordinated and executed User Acceptance Testing (UAT), creating structured test cases aligned with client expectations and supporting end-users throughout.
- Designed and maintained a Playwright (TypeScript) test automation framework, improving regression coverage and reducing manual testing effort per release cycle.
- Introduced an AI-assisted bug resolution workflow using GitHub Issues and GitHub Copilot Agent, enabling automated fix suggestions and pull request creation — reducing developer effort and shortening the bug-to-merge cycle.
- Produced daily activity reports and QA documentation, maintaining full transparency of testing progress across cross-functional teams.

SQA Engineer I | Brain Station 23

Jan 2025 – Dec 2025

- Collaborated with developers, business analysts, and project managers within Agile/Scrum teams to deliver high-quality product releases on schedule.
- Designed and executed comprehensive test cases covering functional, regression, and usability scenarios for web and mobile applications; tracked and resolved defects in Jira and Trello.
- Contributed to Playwright (TypeScript) automation suite, converting repetitive regression workflows to automated scripts.
- Conducted performance testing with JMeter to benchmark system response times and identify scalability bottlenecks.

Associate SQA Engineer & Trainee | Brain Station 23

Apr 2024 – Dec 2024

- Executed functional and regression testing for web and mobile applications; prepared test plans and reports; gained hands-on experience in Agile workflows and QA lifecycle management.

KEY PROJECTS

Shwopno.com — Web, Android & iOS Application

Apr 2024 – Present

- Built and maintained Playwright (TypeScript) automation scripts for regression testing, improving test cycle efficiency for one of Bangladesh's largest e-commerce platforms.
- Integrated automation suite into the CI/CD pipeline using GitHub Actions, enabling automated regression runs on every pull request.
- Conducted JMeter performance testing to assess scalability under high concurrent user loads, identifying and communicating key bottlenecks to the engineering team.
- Led manual functional, regression, and smoke testing across web and mobile, maintaining high product reliability across frequent release cycles.
- Impact: Contributed to enhanced platform reliability and scalability for one of Bangladesh's largest e-commerce systems.

paragonfood.com.bd — Web & Mobile Application

Jul 2025 – Mar 2026

- Executed functional testing of core modules including product browsing, cart, checkout, and payment workflows.
- Performed cross-platform and cross-browser testing (Android, iOS, Chrome, Firefox) to ensure a consistent user experience across all supported environments.
- Designed and maintained test cases, regression packs, and smoke tests; tracked and resolved all defects in Trello in collaboration with the development team.
- Integrated automated tests into the CI/CD pipeline using GitLab, enabling continuous regression checks on every code push.
- Impact: Contributed to improved release stability and reduced production defects through proactive testing.

EDUCATION

Bachelor of Science (BSc) in Computer Science & Engineering (CSE)

Mar 2023

Daffodil International University | CGPA: 3.59 / 4.00

CERTIFICATIONS & TRAINING

Software Quality Assurance — Batch 16 | IT Training BD, Dhaka | 2023

LANGUAGE PROFICIENCY

Bangla: Native **English:** Professional — Reading & Writing (High) | Speaking (Medium)
